

1. Resuelve los siguientes sistemas

$$\begin{cases} \frac{x+15}{8} + \frac{3(y+1)}{16} = 3 \\ \frac{7-x}{2} - \frac{1+y}{12} = 3 \end{cases}$$

$$\begin{cases} \frac{x+2}{5} - \frac{3y-1}{10} = \frac{-3}{10} \\ \frac{2x+3}{8} + \frac{y+7}{4} = \frac{19}{8} \end{cases}$$
